

Automated Test Specification

Overview of all 128 automated test cases on the Doctolib Pre-Check-In platform

Test Coverage Summary: Total Tests: **128** | Unit Tests: **40** | Integration Tests: **64** | System Tests (E2E): **24**

ID	TEST TYPE	TEST CASE DESCRIPTION	SUITE & FILE
#1	Integration Test	should correctly identify admin role via auth.isAdmin()	Admin Authentication Unit Tests tests/backend/admin_auth.test.js
#2	Integration Test	should return false for isAdmin when user role is patient or praxis	Admin Authentication Unit Tests tests/backend/admin_auth.test.js
#3	Integration Test	should return 403 for GET /api/praxis/activity-logs without praxis session	Backend Activity Log API - /api/praxis/activity-logs tests/backend/server_activity_logs.test.js
#4	Integration Test	should return activity logs list for authenticated praxis	Backend Activity Log API - /api/praxis/activity-logs tests/backend/server_activity_logs.test.js
#5	Integration Test	should return 400 on POST when action or status is missing	Backend Activity Log API - /api/praxis/activity-logs tests/backend/server_activity_logs.test.js
#6	Integration Test	should successfully save a manual activity log entry	Backend Activity Log API - /api/praxis/activity-logs tests/backend/server_activity_logs.test.js
#7	Integration Test	should return 400 if patient registration lacks required fields	Backend Auth API - /api/auth/register & /api/auth/login tests/backend/server_auth.test.js
#8	Integration Test	should successfully register a patient with correct hashing and database persistence	Backend Auth API - /api/auth/register & /api/auth/login tests/backend/server_auth.test.js
#9	Integration Test	should deny login for incorrect credentials	Backend Auth API - /api/auth/register & /api/auth/login tests/backend/server_auth.test.js
#10	Integration Test	should authenticate user on correct credentials	Backend Auth API - /api/auth/register & /api/auth/login tests/backend/server_auth.test.js
#11	Integration Test	should return 409 when registering a duplicate email for the same role	Backend Auth API - /api/auth/register & /api/auth/login tests/backend/server_auth.test.js
#12	Integration Test	should return 400 when password is too short (less than 6 characters)	Backend Auth API - /api/auth/register & /api/auth/login tests/backend/server_auth.test.js

ID	TEST TYPE	TEST CASE DESCRIPTION	SUITE & FILE
#13	Integration Test	should successfully register a praxis user with fewer required fields	Backend Auth API - /api/auth/register & /api/auth/login tests/backend/server_auth.test.js
#14	Integration Test	should return 400 if praxis registration lacks required name fields	Backend Auth API - /api/auth/register & /api/auth/login tests/backend/server_auth.test.js
#15	Integration Test	should return 400 if login request has no email or password	Backend Auth API - /api/auth/register & /api/auth/login tests/backend/server_auth.test.js
#16	Integration Test	should return 401 if login email is not found in DB	Backend Auth API - /api/auth/register & /api/auth/login tests/backend/server_auth.test.js
#17	Integration Test	should return loggedIn: false for /api/auth/me without active session	Backend Auth API - /api/auth/register & /api/auth/login tests/backend/server_auth.test.js
#18	Integration Test	should return 403 for buffer-times without praxis session	Backend Dashboard API - Pufferzeiten (Buffer Times) tests/backend/server_dashboard.test.js
#19	Integration Test	should return buffer times list for authenticated praxis	Backend Dashboard API - Pufferzeiten (Buffer Times) tests/backend/server_dashboard.test.js
#20	Integration Test	should return 400 when start/end time is missing	Backend Dashboard API - Pufferzeiten (Buffer Times) tests/backend/server_dashboard.test.js
#21	Integration Test	should return 400 when startTime >= endTime	Backend Dashboard API - Pufferzeiten (Buffer Times) tests/backend/server_dashboard.test.js
#22	Integration Test	should return 400 when recurring buffer time has no dayOfWeek	Backend Dashboard API - Pufferzeiten (Buffer Times) tests/backend/server_dashboard.test.js
#23	Integration Test	should successfully create a recurring buffer time	Backend Dashboard API - Pufferzeiten (Buffer Times) tests/backend/server_dashboard.test.js
#24	Integration Test	should return 400 when creating a buffer time colliding with a patient appointment	Backend Dashboard API - Pufferzeiten (Buffer Times) tests/backend/server_dashboard.test.js
#25	Integration Test	should successfully delete a buffer time	Backend Dashboard API - Pufferzeiten (Buffer Times) tests/backend/server_dashboard.test.js
#26	Integration Test	should handle DB error on delete gracefully	Backend Dashboard API - Pufferzeiten (Buffer Times) tests/backend/server_dashboard.test.js
#27	Integration Test	should return 403 for documents without praxis session	Backend Dashboard API - Praxis-Dokumente tests/backend/server_dashboard.test.js
#28	Integration Test	should return documents list for authenticated praxis	Backend Dashboard API - Praxis-Dokumente tests/backend/server_dashboard.test.js

ID	TEST TYPE	TEST CASE DESCRIPTION	SUITE & FILE
#29	Integration Test	should return 400 when title or file data is missing	Backend Dashboard API - Praxis-Dokumente tests/backend/server_dashboard.test.js
#30	Integration Test	should successfully upload a praxis document	Backend Dashboard API - Praxis-Dokumente tests/backend/server_dashboard.test.js
#31	Integration Test	should return 404 when document does not exist	Backend Dashboard API - Praxis-Dokumente tests/backend/server_dashboard.test.js
#32	Integration Test	should successfully delete a praxis document and its file	Backend Dashboard API - Praxis-Dokumente tests/backend/server_dashboard.test.js
#33	Integration Test	should return 403 for accept without praxis session	Backend Dashboard API - Warteschlange (Queue) tests/backend/server_dashboard.test.js
#34	Integration Test	should accept a patient and set status to in_treatment	Backend Dashboard API - Warteschlange (Queue) tests/backend/server_dashboard.test.js
#35	Integration Test	should return 404 when accepting an appointment not belonging to praxis	Backend Dashboard API - Warteschlange (Queue) tests/backend/server_dashboard.test.js
#36	Integration Test	should mark treatment as done	Backend Dashboard API - Warteschlange (Queue) tests/backend/server_dashboard.test.js
#37	Integration Test	should delay an appointment and store reason	Backend Dashboard API - Warteschlange (Queue) tests/backend/server_dashboard.test.js
#38	Integration Test	GET /api/praxis/terminarten/analyse - liefert Analyse-Daten pro Terminart	Datengestützte Behandlungsdauer & Analysis API tests/backend/server_duration_analysis.test.js
#39	Integration Test	GET /api/praxis/terminarten/dauer - liefert empfohlene Dauer für spezifische Terminart	Datengestützte Behandlungsdauer & Analysis API tests/backend/server_duration_analysis.test.js
#40	Integration Test	PUT /api/praxis/terminarten/einstellungen - verweigert unangemeldeten Zugriff mit 403	Datengestützte Behandlungsdauer & Analysis API tests/backend/server_duration_analysis.test.js
#41	Integration Test	should return exists: false if precheckin does not exist	Backend Precheckin API - /api/precheckin tests/backend/server_precheckin.test.js
#42	Integration Test	should return precheckin details if it exists	Backend Precheckin API - /api/precheckin tests/backend/server_precheckin.test.js
#43	Integration Test	should return 400 on save when missing sessionId or terminCode	Backend Precheckin API - /api/precheckin tests/backend/server_precheckin.test.js
#44	Integration Test	should upsert pre-checkin data in DB and perform query successfully	Backend Precheckin API - /api/precheckin tests/backend/server_precheckin.test.js
#45	Integration Test	should handle submission (submitted=true) and trigger notification queries	Backend Precheckin API - /api/precheckin tests/backend/server_precheckin.test.js

ID	TEST TYPE	TEST CASE DESCRIPTION	SUITE & FILE
#46	Integration Test	should return 500 when database throws an error on GET	Backend Precheckin API - /api/precheckin tests/backend/server_precheckin.test.js
#47	Integration Test	should return appointment details if found in the database	Backend Termin API - /api/termin/:code tests/backend/server_termine.test.js
#48	Integration Test	should auto-seed a demo appointment if not found in DB	Backend Termin API - /api/termin/:code tests/backend/server_termine.test.js
#49	Integration Test	should return 500 when database throws an error	Backend Termin API - /api/termin/:code tests/backend/server_termine.test.js
#50	Integration Test	should return health status with database info	Backend Termin API - /api/health tests/backend/server_termine.test.js
#51	Integration Test	should report query failure when DB query fails	Backend Termin API - /api/health tests/backend/server_termine.test.js
#52	Integration Test	should return registered practices from the database	Backend Termin API - /api/praxen tests/backend/server_termine.test.js
#53	Integration Test	should return 403 without praxis session	Backend Termin API - POST /api/praxis/termine/buchen (Telefonischer Termin) tests/backend/server_termine.test.js
#54	Integration Test	should return 400 when required fields are missing	Backend Termin API - POST /api/praxis/termine/buchen (Telefonischer Termin) tests/backend/server_termine.test.js
#55	Integration Test	should successfully create an appointment with Vorname and Nachname	Backend Termin API - POST /api/praxis/termine/buchen (Telefonischer Termin) tests/backend/server_termine.test.js
#56	Integration Test	should reject booking when patient already has an appointment at that time	Backend Termin API - POST /api/praxis/termine/buchen (Telefonischer Termin) tests/backend/server_termine.test.js
#57	Integration Test	should reject booking when slot is already taken	Backend Termin API - POST /api/praxis/termine/buchen (Telefonischer Termin) tests/backend/server_termine.test.js
#58	Integration Test	should return 403 without praxis session	Backend Termin API - PUT /api/praxis/termin/:code/duration tests/backend/server_termine.test.js
#59	Integration Test	should return 400 when duration is less than 15 minutes	Backend Termin API - PUT /api/praxis/termin/:code/duration tests/backend/server_termine.test.js
#60	Integration Test	should successfully update appointment duration	Backend Termin API - PUT /api/praxis/termin/:code/duration tests/backend/server_termine.test.js

ID	TEST TYPE	TEST CASE DESCRIPTION	SUITE & FILE
#61	Integration Test	should return 404 when appointment does not belong to praxis	Backend Termin API - PUT /api/praxis/termin/:code/duration tests/backend/server_termine.test.js
#62	Integration Test	should get all appointments for the patient	Backend Patient Termin API - Metadata & Cancel tests/backend/server_termine.test.js
#63	Integration Test	should update metadata using PATCH /api/termine/:code/metadata	Backend Patient Termin API - Metadata & Cancel tests/backend/server_termine.test.js
#64	Integration Test	should set status to abgesagt on DELETE /api/termine/:code	Backend Patient Termin API - Metadata & Cancel tests/backend/server_termine.test.js
#65	System Test (E2E)	should render filter and sort UI on landing view	Patient Landing Page - Sorting & Filtering E2E Tests tests/e2e/landing_filters.spec.js
#66	System Test (E2E)	should filter by doctor/praxis	Patient Landing Page - Sorting & Filtering E2E Tests tests/e2e/landing_filters.spec.js
#67	System Test (E2E)	should filter by specialty	Patient Landing Page - Sorting & Filtering E2E Tests tests/e2e/landing_filters.spec.js
#68	System Test (E2E)	should filter by timeframe (today and future)	Patient Landing Page - Sorting & Filtering E2E Tests tests/e2e/landing_filters.spec.js
#69	System Test (E2E)	should sort chronologically and individually	Patient Landing Page - Sorting & Filtering E2E Tests tests/e2e/landing_filters.spec.js
#70	System Test (E2E)	should save filter preferences to localStorage and restore them on reload	Patient Landing Page - Sorting & Filtering E2E Tests tests/e2e/landing_filters.spec.js
#71	System Test (E2E)	should search and auto-fill existing patient details	Patient Database & Telephone Booking E2E Tests tests/e2e/patient_database.spec.js
#72	System Test (E2E)	should book a new patient and manually create their profile	Patient Database & Telephone Booking E2E Tests tests/e2e/patient_database.spec.js
#73	System Test (E2E)	should successfully guide the patient through the complete questionnaire flow	Doctolib Pre-Check-In E2E System Test (Offline Mode) tests/e2e/precheckin.spec.js
#74	System Test (E2E)	Weiter-Button bleibt deaktiviert wenn Beschwerden-Pflichtfelder leer sind	Validierungs-Tests: Pflichtfelder & deaktivierte Buttons tests/e2e/precheckin.spec.js
#75	System Test (E2E)	Absenden-Button bleibt deaktiviert ohne Bestätigungsfeld und Unterschrift	Validierungs-Tests: Pflichtfelder & deaktivierte Buttons tests/e2e/precheckin.spec.js
#76	System Test (E2E)	KI-Fragen-Weiter bleibt deaktiviert solange nicht alle Antworten ausgefüllt sind	Validierungs-Tests: Pflichtfelder & deaktivierte Buttons tests/e2e/precheckin.spec.js

ID	TEST TYPE	TEST CASE DESCRIPTION	SUITE & FILE
#77	System Test (E2E)	Fehlermeldung bei ungültigem Termin-Code (API gibt 404 zurück)	Fehler-Szenarien: API-Fehler und Fehlermeldungen tests/e2e/precheckin.spec.js
#78	System Test (E2E)	KI-Fragen zeigen Fehlermeldung wenn API 500 zurückgibt	Fehler-Szenarien: API-Fehler und Fehlermeldungen tests/e2e/precheckin.spec.js
#79	System Test (E2E)	Nicht eingeloggt: Weiterleitung zu Home-Seite bei geschützter Route	Fehler-Szenarien: API-Fehler und Fehlermeldungen tests/e2e/precheckin.spec.js
#80	System Test (E2E)	Praxis-Dashboard lädt und zeigt Praxis-Name korrekt an	Praxis-Dashboard E2E Tests (Arzt-Ansicht) tests/e2e/precheckin.spec.js
#81	System Test (E2E)	Praxis-Dashboard hat alle drei Tabs (Kalender, Statistik, Gestaltung)	Praxis-Dashboard E2E Tests (Arzt-Ansicht) tests/e2e/precheckin.spec.js
#82	System Test (E2E)	Tab-Wechsel funktioniert: Statistik & Termine Tab wird angezeigt	Praxis-Dashboard E2E Tests (Arzt-Ansicht) tests/e2e/precheckin.spec.js
#83	System Test (E2E)	Praxis-Benutzer wird von Patient-Route zu Praxis-Dashboard umgeleitet	Praxis-Dashboard E2E Tests (Arzt-Ansicht) tests/e2e/precheckin.spec.js
#84	System Test (E2E)	Gestaltung-Tab zeigt Fragebogen-Editor	Praxis-Dashboard E2E Tests (Arzt-Ansicht) tests/e2e/precheckin.spec.js
#85	System Test (E2E)	Telefonischer Termin: Modal öffnen, Formular ausfüllen und absenden	Praxis-Mitarbeiter Workflows tests/e2e/precheckin.spec.js
#86	System Test (E2E)	Telefonischer Termin: Validierung zeigt Fehler bei fehlenden Pflichtfeldern	Praxis-Mitarbeiter Workflows tests/e2e/precheckin.spec.js
#87	System Test (E2E)	Pufferzeit-Tab: Wechsel zum Pufferzeiten-Panel und zurück	Praxis-Mitarbeiter Workflows tests/e2e/precheckin.spec.js
#88	System Test (E2E)	Live-Warteschlange wird geladen und zeigt Patienten	Live-Warteschlange E2E Tests tests/e2e/precheckin.spec.js
#89	Unit Test	should initialize with logged out state	auth.js - Client Authentication Manager tests/frontend/auth.test.js
#90	Unit Test	should correctly set user info and dispatch event on successful login	auth.js - Client Authentication Manager tests/frontend/auth.test.js
#91	Unit Test	should correctly determine praxis role	auth.js - Client Authentication Manager tests/frontend/auth.test.js
#92	Unit Test	should throw an error when login fails with HTTP error	auth.js - Client Authentication Manager tests/frontend/auth.test.js
#93	Unit Test	should correctly register a user and dispatch authChanged event	auth.js - Client Authentication Manager tests/frontend/auth.test.js
#94	Unit Test	should throw an error when registration fails with HTTP error	auth.js - Client Authentication Manager tests/frontend/auth.test.js

ID	TEST TYPE	TEST CASE DESCRIPTION	SUITE & FILE
#95	Unit Test	should update user from /api/auth/me on checkSession()	auth.js - Client Authentication Manager tests/frontend/auth.test.js
#96	Unit Test	should set user to null on checkSession() when not logged in	auth.js - Client Authentication Manager tests/frontend/auth.test.js
#97	Unit Test	should handle network error in checkSession() gracefully	auth.js - Client Authentication Manager tests/frontend/auth.test.js
#98	Unit Test	should clear state and dispatch event on logout	auth.js - Client Authentication Manager tests/frontend/auth.test.js
#99	Unit Test	should handle network error during logout gracefully	auth.js - Client Authentication Manager tests/frontend/auth.test.js
#100	Unit Test	should fall back to static practices on API failure	praxen.js - fetchPraxen() tests/frontend/praxen.test.js
#101	Unit Test	should successfully fetch practices and deduplicate by name	praxen.js - fetchPraxen() tests/frontend/praxen.test.js
#102	Unit Test	should initialize with default data containing all required fields	store.js - State Management tests/frontend/store.test.js
#103	Unit Test	should read the correct termin code from URL search parameters	store.js - State Management tests/frontend/store.test.js
#104	Unit Test	should read the correct termin code from hash query parameters	store.js - State Management tests/frontend/store.test.js
#105	Unit Test	should fall back to sessionStorage for termin code	store.js - State Management tests/frontend/store.test.js
#106	Unit Test	should fall back to demo_12345 when no termin code is available anywhere	store.js - State Management tests/frontend/store.test.js
#107	Unit Test	should set and get values correctly	store.js - State Management tests/frontend/store.test.js
#108	Unit Test	should remove store entry from sessionStorage on clear()	store.js - State Management tests/frontend/store.test.js
#109	Unit Test	should return false for hasSavedProgress() on fresh/default state	store.js - State Management tests/frontend/store.test.js
#110	Unit Test	should return true for hasSavedProgress() when beschwerden freitext is filled	store.js - State Management tests/frontend/store.test.js
#111	Unit Test	should return true for hasSavedProgress() when medikamente are added	store.js - State Management tests/frontend/store.test.js
#112	Unit Test	should return true for hasSavedProgress() when medikamente.keine is checked	store.js - State Management tests/frontend/store.test.js
#113	Unit Test	should return true for hasSavedProgress() when allergien chips are selected	store.js - State Management tests/frontend/store.test.js
#114	Unit Test	should return true for hasSavedProgress() when navigated past intro steps	store.js - State Management tests/frontend/store.test.js

ID	TEST TYPE	TEST CASE DESCRIPTION	SUITE & FILE
#115	Unit Test	should return false for hasSavedProgress() when submitted is true	store.js - State Management tests/frontend/store.test.js
#116	Unit Test	should return true for hasSavedProgress() when a signature exists	store.js - State Management tests/frontend/store.test.js
#117	Unit Test	should reset all progress and generate a new session ID	store.js - State Management tests/frontend/store.test.js
#118	Unit Test	should successfully upload a file and update store state	store.js - State Management tests/frontend/store.test.js
#119	Unit Test	should fail upload when server returns error status	store.js - State Management tests/frontend/store.test.js
#120	Unit Test	should successfully delete a file and update store state	store.js - State Management tests/frontend/store.test.js
#121	Unit Test	should fail delete when API returns error status	store.js - State Management tests/frontend/store.test.js
#122	Unit Test	should default to German language	i18n Internationalization Utility tests/unit/i18n.test.js
#123	Unit Test	should switch to English when setLanguage("en") is called	i18n Internationalization Utility tests/unit/i18n.test.js
#124	Unit Test	should return fallback or key if translation is missing	i18n Internationalization Utility tests/unit/i18n.test.js
#125	Unit Test	should parse YYYY-MM-DD date and time correctly	icsExport utility tests/unit/icsExport.test.js
#126	Unit Test	should parse German date format correctly	icsExport utility tests/unit/icsExport.test.js
#127	Unit Test	should generate valid .ics calendar content with required fields and privacy compliance	icsExport utility tests/unit/icsExport.test.js
#128	Unit Test	should trigger browser file download when exportAppointmentToIcs is invoked	icsExport utility tests/unit/icsExport.test.js
